

Why You Need Offsite Backup

Quick Electronics offers one of the best solutions for protecting your computers against a number of the most common causes of data loss and system failure:

- ✓ **Technical Failures:** Viruses, corrupt files, hard drive failures, power failures, backup media deterioration, etc.
- ✓ **Human Error:** Accidental or intentional changes or deletions, theft, spilled drinks, etc.
- ✓ **Natural Disasters:** Hurricanes, flood, fire, earthquakes, and lightning.
- ✓ **Laptop Users:** Laptops are more likely to suffer hard drive and power failures from being dropped and damaged or are lost or stolen.

Traditional backup methods such Tape, Zip Drives, CDs and DVDs can not reliably protect your information against all of these common risks- but offsite backup can!

Advantages of Offsite Backup

Offsite backup offers a cost effective, convenient, and secure way to automatically back up your critical information offsite every night.

- ✓ **It's Easy:** Simple to set up, backup, and restore files -or- let us install and configure it for you!
- ✓ **It's Automatic:** Backups run at night automatically so staff does not have to remember to start jobs or change media.
- ✓ **It's Fast:** Only changed files are transmitted, saving your valuable bandwidth.
- ✓ **It's Secure:** Your information is transmitted over a secure VPN connection using 128-bit AES encryption through a secure tunnel to our facility. Data is saved on redundant storage arrays with uninterrupted power and redundant connectivity.
- ✓ **It's Offsite:** Your data is protected from viruses, fire, theft, and sabotage.

Backup Software Features

Our custom-made backup software is designed to save time and money, significantly increasing your productivity and efficiency while minimizing costly downtime due to data loss.

Scheduling for Automatic Backups

Backups run automatically on a schedule that's convenient for you. Best of all, you don't have to remember to change any media, start any jobs, or run your cleaning tape!

Simple File Restores

Files can be restored quickly and easily from any computer with internet access.

Built-in CD and DVD writing

In addition to offsite storage, our software supports a large variety of other backup medias including Harddrives, USB drives, CDR, CDRW, DVD-R, DVD-RW and more.

128-bit Encryption

Your data is transferred from your site over a 128-bit encrypted tunnel to our secure servers making your important information virtually impossible for anyone to access without your permission.
